

This infant program is developed with the special needs of that age group in mind. Our infant program provides learning experiences to enhance your child's social emotional development, physical development, cognitive development and language development to help them build a strong foundation.

Each teacher will have an iPad for you to email her with any concerns you may have or just a way to communicate to her. She will also provide you with detailed information about your child's day, including feeding times, diaper changing information and other interesting tidbits.

Safety

Our entry into the building is secured and access is available with a key card provided by our security team. There is a second entry into the classrooms with key card access provided to the parents. You are more than welcome to drop in unannounced during the day and observe you baby interacting with their teachers and peers.

Environment

The environment is clean and sanitary to prevent spread of infection. We have strict guidelines to ensure immediate and constant sanitization of toys and surfaces. We use all natural products for cleaning approved by our state childcare licensing. All children's temperatures will be taken at the door.

Our staff is caring and nurturing, and trained to each individual needs, forming emotional bonds through hugging, cuddling, rocking and soothing the baby and create positive learning experience.

A lot of flexibility is built into the feeding schedule to accommodate each baby's individual needs. Bottles are never propped, and individual care is taken to burp the babies as needed. The older infants that are on table foods are taught appropriate table skills.

Infant Curriculum: Frog Street

Frog Street Infant is designed around the latest early brain research and includes 264 domain-based activity cards specifically designed for little ones 0-18 months. The program is designed to equip caregivers to foster essential growth and build a strong learning foundation.

The infant curriculum is filled with several small group activities. Daily tummy time encourages Gross Motor Movement and builds skill like reaching, pushing, pulling, crawling, rolling, and climbing. Sign language is taught.

Fine Motor Skills and Eye-Hand Coordination are encouraged with different types of games and large manipulatives.

Sensory Skills are built with felt books, textures and other developmental toys, and Cognitive skills like recognizing colors, shapes, and sounds and basic number concepts are also introduced. A play area designed to encourage free movement, enables the infants to explore a wide range of materials, textures and objects for tactile and visual stimulation.

Language Development starts early, with one-on-one interaction, talking to the babies, reading stories, looking at pictures and objects. Storytelling, puppets and finger play add a special element of fun to the baby's day and build on vocal and language skills.

Music plays a big role in encouraging musical movements and rhythm, language development, group plays, singing and dancing.

Hands-On Arts and Crafts involve the babies in experimenting with different textures, and sensations.

Babies enjoy outside play, so a special outdoor playground was built for them for crawling, pulling up, sliding and climbing on safe playground equipment.
